

Smartphone Exif Removal Smart Card

Exif Removal - Do's and Don'ts

- Prevent your phone from including geolocation data when capturing images.
- · Remove Exif data before sharing or posting images, especially images captured in private homes or businesses.
- Whenever possible, use an Exif viewer to verify Exif data has been removed.
- · Before uploading images, use privacy settings to limit the audience to only you or close friends and family.
- · Minimize the use of apps that automatically upload and share captured images (e.g. Instagram, Flickr).
- Even with no Exif data, the content of images may contain identifying information, including persons and locations. Screen content with the assumption that anyone can see, copy, or forward photos that you post online.

Exif Data

Exif (Exchangeable image file format) is a standard format for storing and exchanging image metadata. Image metadata is included in a captured image file and provides a broad range of supplemental information. Some social networks and photo-sharing sites, such as Flickr, Google+, and Instagram, have features that share Exif data alongside images. Others, including Facebook and Twitter, do not share Exif data but may utilize the information internally. Exif data is stored as tags, some of which reveal unique identifying information.

Tag Category	Important Tags	Identity Implications
Geolocation	GPSLongitude, GPSLongitudeRef, GPSLatitude, GPSLatitudeRef, GPSDateStamp, GPSTimeStamp, GPSAltitude, GPSAltitudeRef, GPSProcessingMethod	Ability to reveal the exact location of private places, such as homes or offices. Some photosharing sites, including Google+ and Flickr, publicly display image GPS coordinates on a map.
Timestamps	ModifyDate, DateTimeOriginal, CreateDate	Creates a log of behavioral patterns and personal timelines.
Camera	Make, Model, Serial Number	A unique serial number identifies the particular device for an image or sets of images.
Authorship	Artist, Owner Name, Copyright	Links images with a name or organization.
Image Summary	ImageDescription, UniqueImageID, UserComment	Potentially reveals identifying information about the content of the images, such as captured persons or locations.

Limiting Exif data, especially geolocation information, before distributing image files can help protect your online identity from overexposure. This should be done in two stages: 1) Preventing your smartphone from storing identifying Exif data in image files and 2) Removing existing Exif data from image files using an Exif removal application.

Prevent the Capture of Geolocation Data

iOS

If iOS location services are turned off, images captured with the native iPhone camera app will not contain geolocation Exif data.

- Select the Settings app and navigate Privacy >Location Services.
- 2 Turn off location services altogether or for the iPhone's camera applications.
- Return to the *Settings* app and navigate *Privacy >Photos*.
- 4 Disable the permissions for other apps to have access to the photos stored in the device's camera roll.

Android

Turning off location storage in the Android Jelly Bean camera application prevents captured images from containing Exif data.

- Open the camera app. A white camera symbol in the bottom right corner indicates the app is in camera mode.
- Tap the white circle in the bottom right corner to bring up a cluster of options in the middle of the screen. Click the settings symbol.

- Click the location icon on the far left to disable location data.
 - When the location symbol appears with a line through it, then location data has been successfully disabled.

Prevent the Capture of Geolocation Data

- Taking a screenshot of a photo on a device running iOS or Android Jelly Bean will create a new image containing no Exif data. To take a screenshot on an iOS device, simultaneously press the lock and home buttons or google how to take a screenshot on your specific android.
- Photos taken in airplane mode contain geolocation data. Novetta recommends turning off location services/storage for your smartphone's camera
 application, as shown above.
- Remember that uploading or sharing a lower quality image will still contain Exif data. Exif data and image quality have no correlation.

Smartphone EXIF Removal Smart Card

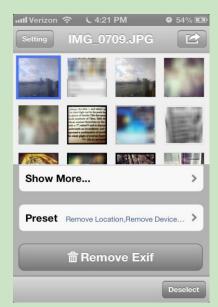

Exif Removal Smartphone Apps

TrashExif for iOS

TrashExif is a free app that deletes geolocation and Camera information from image files stored on your iOS device.

- Download the TrashExif app from the *App Store*.
- Open the TrashExif app and select a photo(s) to clear of Exif data.
- 3 Select Presets, then in the Removal Presets [sic] window, select Remove Location and Remove Device Information.
- Return to the previous screen by clicking the name of the image in the upper-left.
- Scroll down and click
 Remove Exif. This creates
 a copy of the image file(s)
 without Exif and does not
 alter the original image file.
 The copy with No Exif is

displayed as most recent in your iPhone Photo app.

PhotoInfo Eraser for Android

PhotoInfo Eraser is a free app that deletes all Exif data from image files stored on your Android device.

- Download the PhotoInfo Eraser from the Play Store.
- Open the PhotoInfo Eraser app and select *Gallery*.
- Navigate your phone and select an image.
- Select Tag Delete and press
- Navigate *Gallery*. A copy of your photo with no EXIF is now available in the *PIEraser* folder.

Viewing and Removing EXIF Data in OS X

Use the ImageOptim application (available at http://imageoptim.com/) to remove Exif data on your OS X device.

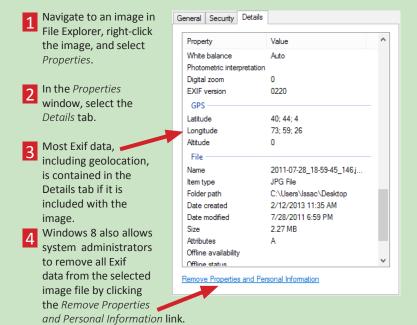

- Open the ImageOptim application
- 2 Drag the photos for Exif removal into the application window and wait for a green check mark to appear next to the file name.

3 Check that the Exif data has been removed by right-clicking the image and select Get Info. Exif data is listed under More Info.

Viewing and Removing EXIF Data in Windows 8

Use the Windows 8 OS to verify EXIF data has been removed.
